iPad 3.2 — Problem

When localised to Singapore

Calendar starts week on Sunday

iPad 3.2 — Correct

Calendar should start week on Monday when localised to Singapore

iPhone OS4 — Problem

When localised to Singapore   Calendar starts week on Sunday

iPhone OS4 — Correct

Calendar should start week on Monday
instead of Sunday when localised to Singapore

Problem

- Singapore, a former colony of UK, adopts UK convention in many areas

- Most monthly calendars in Singapore start the week on Monday instead of Sunday

- iOS, like Mac OS X, starts the week on Sunday instead of Monday when localised to Singapore

Problem

- However, unlike Mac OS X, iOS users have no way to get the Calendar to start week on Monday without changing region format to UK or Australia

- But using this workaround means that users will get wrongly localised results in search engines in mobile Safari

Setting Region Format to Australia to fix the calendar problem creates additional problems in searches

Suggestions

- Not everyone in a region agrees on a standard way to display the calendar

- Instead of using *Region Format* to control this behaviour, have a separate option under *Settings > Mail, Contacts, Calendars > Calendars* for users to customise which day to start week on, as with Mac OS X's iCal
